

A REPORT ON

# GLOBAL SALES AND FINANCIAL PERFORMANCE DATASET

*An Analytical Study Using Interactive Sales Dashboard Data*

September 2026

## 1. Introduction

In today's globalized business environment, organizations generate vast amounts of transactional data across categories, regions, and time periods. Analyzing this data effectively is essential for making informed financial and operational decisions. This report presents an analytical study of the 'Global Sales and Financial Performance' dataset, visualized through an Interactive Sales Dashboard. The dashboard consolidates key performance indicators (KPIs), product-level sales records, and category, regional, monthly, and employee-wise breakdowns, enabling a holistic view of business performance.

The objective of this report is to interpret the dataset, highlight significant trends and patterns, and derive actionable insights that support strategic decision-making in sales and financial management.

## 2. About the Dataset

The Global Sales and Financial Performance dataset captures order-level transactions across multiple product categories such as Clothing, Accessories, Kitchen, Electronics, Outdoors, and Furniture. Each record includes the Product Name, Total Sale value, Total Quantity sold, and Total Profit earned. The dataset also carries dimensional attributes such as Region (Central, South, West, North, East), Employee Name (sales representatives), and MonthName, allowing the data to be sliced and analyzed from several perspectives. Interactive filters for Region, Year (2018-2024), and Category allow dynamic exploration of the dataset.

## 3. Key Performance Indicators (KPIs)

The dashboard summarizes the entire dataset through the following headline metrics:

|                                |                            |                               |                             |                             |                               |
|--------------------------------|----------------------------|-------------------------------|-----------------------------|-----------------------------|-------------------------------|
| <b>706.36</b><br>Average Sales | <b>100K</b><br>Order Count | <b>300K</b><br>Total Quantity | <b>70.64M</b><br>Total Sale | <b>25.12M</b><br>Total Cost | <b>25.12M</b><br>Total Profit |
|--------------------------------|----------------------------|-------------------------------|-----------------------------|-----------------------------|-------------------------------|

The business processed 100,000 orders amounting to a total quantity of over 300,000 units sold, generating a total sale value of approximately 70.64 million. Against a total cost of 25.12 million, the business realized a total profit of approximately 25.12 million, reflecting a healthy overall margin on revenue.

## 4. Dashboard Overview

Figure 1 presents the complete Interactive Sales Dashboard as designed, combining KPI cards, charts, the product-level table, and interactive slicers for Region, Year, and Category.

Global Sales and Financial Performance Interactive Sales Dashboard

## 5. Category-wise Sales Analysis

Clothing emerges as the leading category by total sales, followed closely by Accessories and Kitchen. Electronics, Outdoors, and Furniture also contribute significant, comparatively closer, shares of total sales. The relatively even distribution across categories (Figure 2) indicates a diversified and well-balanced product portfolio rather than dependence on a single category.

*Total Sale by Category (approximate values derived from dashboard visualization)*

## 6. Monthly Sales Trend

Ranking months by total sales shows December at the highest level, followed by May and January, with a gradual decline toward June and November. This pattern suggests a seasonal peak around the year-end period, useful for planning inventory and promotional campaigns in advance of high-demand months.

*Total Sale by Month, ranked highest to lowest*

## 7. Regional Performance

Sales are distributed fairly evenly across the five operating regions. Central leads marginally with approximately 20.23% of total sales, closely followed by West, North, East, and South, each contributing close to 20% of total sales. This near-uniform regional spread suggests consistent market penetration and demand across all geographies, with no single region overwhelmingly dominant.

Figure 4: Total Sale by Region

## 8. Employee-wise Profit Contribution

Total profit by employee shows a wide variance in individual performance. Khaled Ha. leads in profit contribution, followed by Omar El-S. and Hassan El-..., while Ali Ibrahim, Mona Gar., and Fatima Joh. record comparatively lower profit contributions. This gap highlights an opportunity for targeted training, mentoring from top performers, and review of territory or account allocation to improve overall team performance.

*Total Profit by Employee Name*

## 9. Product-wise Sales and Profit Table

The table below lists product-level performance extracted from the dashboard, showing Total Sale, Total Quantity, and Total Profit for each product code (a representative subset of the full dataset, with dataset-wide totals in the last row).

| Product Name | Total Sale            | Total Quantity | Total Profit          |
|--------------|-----------------------|----------------|-----------------------|
| ACC-CAS-002  | 5,47,628.90           | 1548           | 2,05,613.78           |
| ACC-CAS-055  | 1,12,782.02           | 1398           | 11,427.02             |

| ACC-KEY-028  | 5,70,711.57           | 1438           | 3,09,887.13           |
| ACC-KEY-072  | 2,81,000.87           | 1444           | 61,960.51             |
| ACC-KEY-073  | 1,37,805.64           | 1422           | 11,204.98             |
| ACC-KEY-103  | 2,80,733.87           | 1429           | 17,940.77             |
| ACC-KEY-112  | 63,922.92             | 1462           | 16,217.86             |
| ACC-KEY-116  | 5,01,540.82           | 1408           | 1,64,367.06           |
| ACC-KEY-133  | 7,58,258.82           | 1584           | 3,40,352.10           |
| ACC-KEY-146  | 21,996.50             | 1443           | 1,794.50              |
| <b>Total</b> | <b>7,06,35,711.87</b> | <b>300006</b>  | <b>2,51,16,018.03</b> |

Products such as ACC-HEA-092, ACC-CHA-018, and ACC-KEY-133 stand out with high total sales and strong profit contribution, whereas products like ACC-KEY-146, ACC-CAS-055, and ACC-HEA-029 show comparatively low sales and thin profit margins despite reasonable order quantities. This suggests that pricing, discounting, or cost structures for the low-margin products may need to be reviewed.

## 10. Key Insights

- The business achieved a strong overall profit margin, with total profit of approximately 25.12M against total sales of 70.64M.
- Clothing and Accessories are the strongest performing categories, indicating where marketing and inventory investment should be prioritized.
- Sales exhibit seasonality, peaking in December and declining toward mid-year months such as June and November.
- Regional performance is well balanced, with all five regions (Central, South, West, North, East) contributing roughly 19-20% of total sales each.
- Employee performance varies significantly; top performers such as Khaled Ha. generate substantially more profit than the lowest performers.
- A subset of products (e.g., ACC-KEY-146, ACC-HEA-029) generate high order volumes but disproportionately low profit, warranting a pricing or cost review.

## 11. Conclusion

The Global Sales and Financial Performance dataset, as visualized through the Interactive Sales Dashboard, provides a comprehensive view of how sales, cost, and profit are distributed across products, categories, regions, employees, and time. The analysis reveals a financially healthy business with balanced regional performance and a diversified category mix, while also surfacing specific areas, such as underperforming products and employees, that merit closer management attention. Interactive dashboards of this kind enable faster, data-driven decision-making and can be extended with predictive analytics (e.g., sales forecasting and profit optimization) as a future enhancement.
